Information Age Publishing : Contemporary Perspectives in Data Mining, Volume 1 before purchasing it in order to gauge whether or not it would be worth my time, and all praised Contemporary Perspectives in Data Mining, Volume 1:

The series, Contemporary Perspectives on Data Mining, is composed of blind refereed scholarly research methods and applications of data mining. This series will be targeted both at the academic community, as well as the business

practitioner. Data mining seeks to discover knowledge from vast amounts of data with the use of statistical and mathematical techniques. The knowledge is extracted from this data by examining the patterns of the data, whether they be associations of groups or things, predictions, sequential relationships between time order events or natural groups. Data mining applications are seen in finance (banking, brokerage, insurance), marketing (customer relationships, retailing, logistics, travel), as well as in manufacturing, health care, fraud detection, home-land security, and law enforcement.

About the Author Lawrence is Adjunct Professor of Industrial and Systems Engineering at Rutgers University in Piscataway, New Jersey.
