**S. Nuryanah, S. Islam : Corporate Governance and Financial Management: Computational Optimisation Modelling and Accounting Perspectives** before purchasing it in order to gage whether or not it would be worth my time, and all praised Corporate Governance and Financial Management: Computational Optimisation Modelling and

## Accounting Perspectives:

This book integrates corporate governance, corporate finance and accounting to formulate sound financial management strategies. It offers practical steps for managers using an integrated optimisation financial model to achieve good corporate governance practices which lead to lower risks and higher firm value.

The authors of this book aim at formulating sound financial management strategies using an integrated optimisation financial model. With this research monograph, the authors are able to fulfill this goal. I believe that academics can learn from many of the ideas in this book. The way the authors construct the model and formulate the constraints contains a lot of thoughtful work. I found it interesting to learn how the authors translated good corporate governance practices into equations. (Gunther Friedl, *The International Journal of Accounting*, Vol. 5 (2), 2016)

**About the Author**  
Siti Nuryanah is a Researcher and a Lecturer in Accounting in the Faculty of Economics, Universitas Indonesia.
