In this new Architecture Brief,nbsp;Ethics for Architects, Thomas Fisher presents fifty case studies representing a broad range of ethical dilemmas facing today's architects, from questions regarding which clients to work for, to the moral imperatives of reclaiming building materials for construction instead of sending them to landfills. This timely book features newly relevant interpretations adapted to the pervasive demands of globalization, sustainability, and

developments in information technology. Fisher's analysis of architecture's thorniest ethical issues are written in a style that is accessible to the amateur philosopher and appealing to professional architects and students alike. Thought-provoking and essential, *Ethics for Architects* is required reading for any designer who wants to work responsibly in today's complex world.

"Thoughtful... Fisher encourages readers to rethink their priorities beyond monetary gain and demonstrates through discussions and analysis that financial riches alone have never satisfied architects. His book is an invaluable aid for developing a more rounded definition of success in architecture." --Architectural Record, June 2011 "Written with disarming directness and simplicity, Fisher offers sage ethical guidance through re-purposing the idea of lifecycle costing (for us mystics karma?) when deciding whether youve acted ethically in your practice, with particularly invaluable examples for the U.S. design juggernaut working in China and the Middle East. His postscript could have been preface: In a depressed economy, ethics may seem extraneous, something nice to do once we pay the bills. But the opposite is true." --ArchNewsNow.com, December 3, 2010
