From OUP Oxford : Europe and the Governance of Global Finance before purchasing it in order to gauge whether or not it would be worth my time, and all praised Europe and the Governance of Global Finance:

The European Union (EU) has emerged as a central actor in financial governance. Hardly any corner of European financial markets remains untouched by EU rules, and key regulatory competences have been shifted from national authorities to supranational ones. At the same time, the global context has become ever more important for how and to

what effect the EU regulates its financial markets. On the one hand, EU policymaking is embedded in global initiatives such as the Basel Committee on Banking Supervision. On the other hand, the EU now rivals the USA in its ability to shape global rules. Scholars and practitioners cannot make sense of EU rulemaking without studying its links to global financial governance, just as to understand how global initiatives evolve they have to appreciate the rise of the EU as a global regulatory force. This book charts and analyses this centrality of the European-global link in financial governance for the first time. Its chapters, written by experts in the specific fields, cover the whole breadth of financial markets. They range from banking, auditing and accounting to derivatives trading, money laundering, and tax governance. This book offers comprehensive coverage of: how and why global and European financial governance have co-evolved over time; how global and European rules, institutions, and actors are linked today; and what this implies for future global and European financial governance. It is essential reading for anyone who wants to understand the dynamics of either global or European financial regulation.

"The reader gets a full, analytically rich picture of EU and global finance. The volume's findings provide valuable insights into the future direction of the EU's place in global finance. In particular, it underlines how joint action by the EU has resulted in the erosion of the unipolar US dominance in global finance." -- Journal of European Integration

About the Author Daniel Mugge, Associate Professor in Political Economy, University of Amsterdam Daniel Mugge is an Associate Professor in Political Economy at the University of Amsterdam. His research focuses on finance and its governance and the political economy of macroeconomic indicators. In the EU-funded GR:EEN project on Europe's role in the world (2011-2015) he leads the work on finance.
