From Routledge : Post-2020 Climate Change Regime Formation (Routledge Advances in Climate Change Research) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Post-2020 Climate Change Regime Formation (Routledge Advances in Climate Change Research):

The fate of the climate change regime hangs in the balance as the UN-led negotiations try to forge a new international strategy for the post-2020 period. Since 1992, the UNFCCC and its Kyoto Protocol has been the primary legal instrument to respond to the climate challenge. However, the intergovernmental process has been riddled with problems that have rendered it ineffective. The changing economic landscape has further made this country grouping problematic as some developing countries now emit more than some of their advanced counterparts. Such problems have crippled the existing regime in adequately addressing climate change. Building upon the expertise of the contributors of this volume, this ground-breaking collection aims to show the way forward for the intergovernmental process. It is the first of its kind to explore the key features of the regime, featuring meticulously researched pieces

from leading experts in the field. Each chapter responds to the questions surrounding the political and structural limitations of the current top-down approach taken in climate negotiations and proposes various alternatives countries can take to overcome such limitations in the process of building the post-2020 climate change regime. In particular, this collection underscores the concept of low-carbon development and green growth to make the climate change regime more effective.

About the Author Suh-Yong Chung is an Associate Professor in the Division of International Studies at Korea University and Director of Center for Climate and Sustainable Development Law and Policy, Republic of Korea.
